

Sphagnum Moss

Sphagnum Moss is a renewable natural resource, which provides natural nutrients to promote plant growth. Which transforms it into an excellent substrate for Plants production, mainly for orchid flowers.

Features

Has the property of being a passive water retainer, absorbing 20 times its weight in water. This allows plants to grow with constant humidity, but without saturating them, favoring Hydro Saving in the production of various crops.

Offers extraordinary oxygenation to plants roots, which contributes a rapid growth, allowing, in the case of flowers, a longer flowering stage.

Provides antiseptic characteristics, it has a preservative that helps the plant resist diseases and parasites.

Chemical Analysis

PH	4,3
C/E	dS/m 0,5
N	mg/kg 141
P	mg/kg 118
K	mg/kg 3780

Sustainable and renewable

It is a renewable natural resource, which can return to its harvest height in a period of 2 to 5 years, depending on weather conditions. Currently, it is based on a decree of law (decree 25 of the Ministry of Agriculture) that guarantees that its harvest and management are adequate to perpetuate the resource in time, which makes it environmentally friendly.

Pack size

Bag Size	Box: 12 bags
26 x 22 x 16 cm	54 x 46 x 50 cm

Container capacity

Container	Quantity
40 HC (76,2 mt3)	6.900 bags per container, 575 Boxes*
20" (33,1 mt3)	3.000 bags per container, 250 Boxes*

* These quantities are approximate, may vary approx +- 6%
